

Controlled Data Transfer, Secure Data Transportation

Sophisticated Rights Assignment based on Groups, Users or Computers

Control individual access rights directly for groups, users and computers or a combination thereof. This significantly reduces the administrative burden and ensures transparency.

Synchronization of User Directories

Already existing users and user group definitions in Microsoft Active Directory or Novell eDirectory are synchronized with the cynapspro management console. This way you avoid double efforts with regard to the definition of users or user groups for access control lists and you reduce the time required for configuration and maintenance.

Complete Offline Support

Using secure remote authorization codes, access rights for computers that are not connected to the network can be changed at any time. MobileCryption allows users to access encrypted data anywhere and at any time.

Flexible Device Management

Device permissions may be set for device types, device models or individual devices defined by serial numbers. You can thus benefit from the use of corporate devices without compromising security.

Secure File Management

In addition to setting device security, you can permit or stop the data transfer to and from devices depending on the file type. You can thus prevent the copying of in-house data to external memory stores and thus its possible misuse or loss.

Intuitive Management Console

The central, user-friendly management interface makes it possible to assign complex settings with a few mouse clicks. The console and the locally installed agent are available in various languages.

Comprehensive Analysis, Protocols and Reports

Information about access rights, access control, blocked requests, etc. can be evaluated, analyzed and exported.

Complete Audit History

Password protected (four eyes principle), detailed access log with filtering and sorting options. In case of suspected misuse of data you can see who has accessed which files. All actions of the administrator are also fully logged.

Ticketing System

Change requests by the users are recorded in a ticketing system and can be implemented directly from the ticket.

Integration with 3rd Party Software

An XML interface makes it possible to fully integrate the access rights management into your established help desk solution. You can combine it with your authorization workflow or other processes you have defined and your help desk staff does not need to get used to an additional console.

Distributed Environments

Several servers replicating each other can be used at the same time.

devicepro ultimate 2009

will guarantee you, that ...

...no one can carry out in-house data, bypassing your firewall by simply using a USB-thumb drive or an external hard disc.

...no one will bring in viruses, Trojans or other infections via USB-thumb drives or other external devices.

...only authorized applications can be started within your company.

...data on external devices is automatically encrypted.

...company data remains secure when a notebook is lost or stolen.

...you can access your encrypted data, anytime and anywhere.

complete - flexible - secure - enterprise-ready

About cynapspro:

Headquartered in Ettlingen, Germany, cynapspro GmbH is a leading provider of data loss prevention solutions. Cynapspro solutions shield companies from vulnerabilities arising from the use of new storage media and data transmission mechanisms, from the loss or theft of USB storage media or notebooks, and from the unauthorized use of applications. Cynapspro solutions include device management, application management and encryption for external storage devices or the hard disk.

devicepro

Did you know that up to 80% of all IT security breaches and 70% of all data theft happens within the company?

Control data transfer from and to all external devices, ports, WiFi or CD/DVD drives!

The loss of data caused by the use of mobile storage media has been increasing strongly and steadily. Unmanaged mobile storage media, in particular memory sticks and external hard drives that are connected through the USB port, are a threat to any company or institution. DevicePro® reliably prevents data loss or the import of malign or unauthorized software by controlling access to all external devices. Draw a line and improve data security now with DevicePro®. Do not wait to react until it is too late. Protect your network today and manage your equipment efficiently and intuitively with DevicePro®.

applicationpro

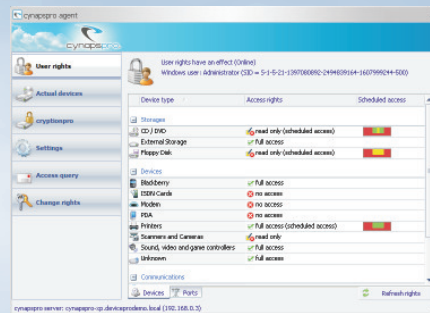

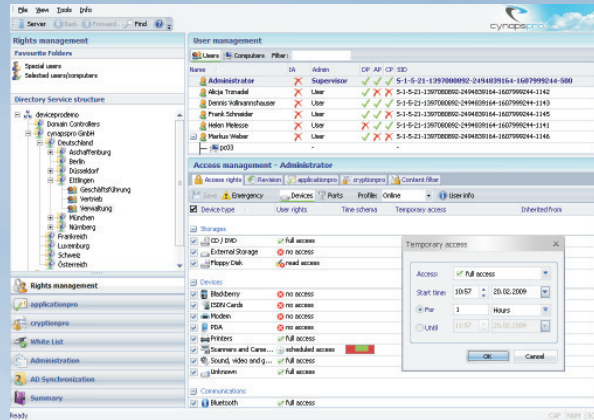

Do you know which private (and unlicensed) applications are installed on company machines? Or how many working hours are lost every year by the private use of company computers, by users exchanging files or playing games?

Block all unauthorized applications by using the most effective protection against unlicensed or unwanted software!

The uncontrolled starting of applications and opening of files is a growing problem for businesses. Malware and spyware cause enormous economic damage, and so can viruses and Trojans. Proactive solutions such as ApplicationPro® directly block unlicensed or hazardous applications. With ApplicationPro® you define which applications may be executed in your company (whitelist) or which applications will be blocked (blacklist).

devicepro ultimate

DevicePro Ultimate contains DevicePro, CryptionPro and ApplicationPro.

cryptionpro

Are you aware, that more than 11 million external storage devices are stolen every year?

Encrypt company data on mobile storage devices!

USB mass storage devices, memory cards and other external devices can easily store a data volume of several gigabytes, data that will leave the office in someone's pocket. These small, mobile storage media are easy to forget or lose, which can cause an immense economic damage if they fall into the wrong hands.

Still, these small, mobile storage devices provide a valuable service and preventing all employees from using them would be unnecessarily restrictive. cryptionpro automatically and reliably encrypts the data on mobile storage media without disrupting the user and keeps your data safe. Users won't even notice! CryptionPro provides the protection needed without depriving employees of the use of mobile storage media..

cryptionpro HDD

Are you aware, that more than 25.000 notebooks are forgotten in taxis every year and that more than 1500 notebooks are left behind at every major airport?

Protect sensitive data by encrypting your hard drives!

CryptionPro HDD ® provides comprehensive protection for the information on your mobile computer. Unauthorized access to the notebook and thus to the stored data or even access to the corporate network on the notebook will be prevented. If the notebook falls into the wrong hands, the information on the hard disk is fully protected. CryptionPro HDD ® provides secure access protection (pre-boot authentication) and disk encryption (software- and hardware-based) - the perfect protection for all data stored on mobile machines.

device management - file-based encryption - hard disk encryption - application control

References:

"With DevicePro, we had the management of mobile devices safely under control from the outset. In addition to the comprehensive functionality, I would particularly like to mention the close cooperation with the manufacturer cynapspro that went far beyond the usual support expected."

Michael Kraemer, Landeskriminalamt Saarland (State Office of Criminal Investigation)

"We already had the solution of another manufacturer in place for about 2,000 users. We then decided for the use of cynapspro, because it provides all the functionality we expected from a device management solution."

Peter Schwendner, Rudolf Wild GmbH & Co. KG

Supported devices and ports:

Floppy Disc, CD/DVD-Rom, USB Mass Storage, SD/MMC Cards, Infrared, Bluetooth, WiFi, FireWire, Parallel Port, Serial Port, PCMCIA Cards, PDA, Blackberry, USB-Ports, ISDN-Cards, Modem, PDA, Printer, Scanner, Digidam, Sound-Video- and Game-Controller, etc...

Free evaluation:

A fully functional version of our software is available for download from the cynapspro website, together with a free 5-user license. Please contact us at +44 795.893.3094 or at sales@cynapspro.co.uk, if you are interested in a larger test installation.
